PROFESSIONAL SUMMARY

Data Analyst and Business Intelligence professional with 7+ years in upstream oil & gas, specializing in Power BI, SQL, and Python for production, reservoir, and operational analytics. Turns complex field data into dashboards and decisions: prioritized 293 high-potential steamflood opportunities across 700+ patterns, cut a reporting cycle by 83%, and completed verification of a 48-well field data repository on target. Based in Indonesia (UTC+7) and open to full-time remote data analyst and business intelligence roles.

CORE SKILLS

Data Analytics: SQL (Joins, CTEs, Window Functions, Subqueries, Aggregations), Data Cleaning, Data Verification and Validation, Statistical Analysis, Exploratory Data Analysis

Business Intelligence: Power BI (Data Modeling, Star Schema, DAX, Power Query/ETL, Interactive Dashboards, Drill-through, Row-Level Security), Spotfire, KPI Reporting

Python & Machine Learning: Python (pandas, scikit-learn, XGBoost), Classification, Class Imbalance Handling, Hyperparameter Tuning, Model Evaluation

Data Management: Data Quality, Data Integration, Data Repository Management, Operational Data Management

Domain: Production Analytics, Reservoir Analytics, Well Performance, Steamflood Surveillance, Petrel

Languages: Indonesian (Native); English

PROFESSIONAL EXPERIENCE

PT Pertamina EP Cepu Zona 11 – Head Office **Jun 2024 – Present**

Data Analyst – Well Operation, Petrophysics and Data Management

- Completed, with the team, the verification and completion of the well data repository for an entire field (47 wells) on target, consolidating data from multiple sources.
- Streamlined reservoir data collection and management for daily operations, improving accessibility for cross-functional analysis in a large-scale field environment.
- Designed a structured, dynamic data organization system that improved data accessibility and the efficiency of cross-functional team analysis.
- Managed critical data uploads to the UDIS ODR system, maintaining data integrity and availability for operational reporting and analysis.

PT Pertamina Hulu Rokan Zona 2 & 3 – Duri Field **Mar 2022 – Dec 2023**

Petroleum Engineer – Asset Optimization Heavy Oil

- Analyzed 700+ patterns through integrated reservoir-production surveillance and prioritized 293 high-potential steamflood opportunities for field optimization.
- Developed interactive Power BI dashboards that automated production monitoring and anomaly detection, helping operational teams identify production exceptions more efficiently.
- Monitored and evaluated steamflood injection and production performance to keep it aligned with reservoir management goals.
- Collaborated with cross-functional teams to design corrective action plans for underperforming patterns, driving field optimization.

PT Pertamina Hulu Rokan Zona 2 & 3 – Minas Field **Apr 2019 – Feb 2022**

Petroleum Engineer Support – Analytical Support Team IEM

Concurrent assignment (Nov 2020 – Aug 2021): also worked in the Well Reliability Optimization team (next entry) to provide temporary coverage for retiring staff.

- Digitized operator daily checklists, reducing the reporting cycle time by 83% (from 30 minutes to 5 minutes).
- Built interactive Power BI dashboards that automated production monitoring and anomaly detection for operational users.
- Delivered Power BI training to engineers and operations teams to support self-service analytics and knowledge transfer.

- Executed real-time production surveillance and exception management using Integrated Exception Management (IEM) systems.

PT Pertamina Hulu Rokan Zona 2 & 3 – Duri Field **Nov 2020 – Aug 2021**

Petroleum Engineer Support – Well Reliability Optimization (Heavy Oil)

Held concurrently with the Minas Field role: worked across two teams to provide temporary coverage for retiring staff.

- Optimized Sucker Rod Pump (SRP) performance through evaluation of dynamometer data and diagnostic analysis.
- Supported well service programs and pump replacements to restore offline or low-performing wells quickly.
- Initiated a best-practice verification protocol for dynamometer conditions, reducing operational risks and errors in well-status reporting.

PT LAPI ITB – Bandung **Aug 2018 – Mar 2019**

Junior Reservoir Engineer

- Ran reservoir simulations and data processing to evaluate reservoir behavior.
- Performed history matching to validate simulation models and improve the accuracy of reservoir characterization.
- Used Petrel for production forecasting to support long-term strategic planning.

Institut Teknologi Bandung – Bandung **Jan 2016 – May 2016**

Assistant of Statistical Laboratory

- Delivered briefings on data processing methods and practices to support statistical accuracy.
- Tutored second-year students in statistical software and data interpretation.

PROJECTS

Symptom-Based Illness Classification (Machine Learning) **Personal project**

Python, pandas, scikit-learn, XGBoost | github.com/resiayukp/symptom-classification-logistic-regression

- Compared eight classification algorithms (KNN, Logistic Regression, SVC, Decision Tree, Random Forest, Gradient Boosting, XGBoost, MLP) on a synthetic, imbalanced dataset of 44,453 records and 20 symptom features, tuning each with cross-validated grid search.
- Applied class weighting to handle severe imbalance (COVID 5%, COLD 2% of records): COVID recall rose from 0.52 to 0.95 and COLD recall from 0.64 to 1.00 while accuracy stayed at 0.93; balanced accuracy rose from 0.77 to 0.96.
- Found that six models made identical predictions at the dataset's ~93% accuracy ceiling and selected Logistic Regression as the simplest, fastest, and most interpretable option (test accuracy 0.932, balanced accuracy 0.956, macro F1 0.812).
- Interpreted model coefficients to show which symptoms drive each prediction and documented limitations, including a precision of about 0.5 for COLD and COVID predictions.

Volve Field Production Analytics Dashboard (Power BI) **Personal project**

Power BI, DAX, Power Query | github.com/resiayukp/volve-field-production-analytics-dashboard

- Built a four-page interactive dashboard on Equinor's open Volve dataset covering oil, gas, and water production and water injection, with well-level and spatial analysis.
- Designed a star-schema data model and DAX measures for production trends, well performance, and operational KPIs.
- Implemented data transformation and validation workflows in Power Query.

EDUCATION

Institut Teknologi Bandung (ITB) **2018**

Bachelor of Science in Petroleum Engineering | GPA: 3.57 / 4.00
